Diagnostics for neural antibodies in Labor Krone

The request form has been updated
and there are new parameters

Dear colleagues,

we have updated our request form for a more efficient use and better overview: Formtype 18 is now called **Neurodiagnostikum – Request form 1** Neural antibodies/nerve- and muscle-antibodies.

- For each clinical syndrome you will find all relevant as well as differential diagnostically important analyses
- New and clear design
- Regular update of **Request form 1** directly on neuro.laborkrone.de

You can print the form any time and therefore have the most actual overview on possible analyses and test panels. You therefore don't have to store and reorder request forms nor expose off old forms. Printed forms can be issued if required.

We are happy to answer any of your questions regarding the request for neural antibody diagnostics by email to neuroak@laborkrone.de or by telephone **+49 (0) 5222 8076-259**.

With kind regards,
Labor Krone

We would also like to draw your attention to the additions to our analyses spectrum:

Myositis

The immunoblots were extended by HMGR and cN-1A from 16 to 18 parameters.

New: Supplementary panel with Zo, KS and Ha for antisynthetase-syndrome.

LEMS / Paraneoplastic cerebellar degeneration

Antibodies against N-type VGCC

Limbic encephalitis

Antibodies against adenylate kinase 5 [Ak5], cell-based assay

Autoimmune autonomous ganglionopathy

Antibodies against ganglionic [alpha-3] acetylcholine receptors
